GPT SIT Report - GPT Reader Service

Date: 2026-03-30 | Iterations: 4/50 | Verdict: FAIL

Pass: 2 Fail: 2 Not Testable: 14

Copyright 2026 Skip Snow. All rights reserved.

Req	Verdict	Evidence	Notes
R7	PASS	Query limit=100 ? HTTP 507 response with error=response_too_large	Response cap enforced correctly
R14	PASS	507 response included fields: estimated_result=101 and suggestion	Error body contains required guidance
R19	FAIL	Multiple queries executed; longest elapsed_ms ~4445ms, no timeout	Could not trigger 30s timeout; no retry behavior observed
R35	FAIL	Query using MONGO_READONLY_PIPELINE returned HTTP 200 with docume	Pipeline cluster not paused or service not enforcing expected 503 behavior

BUGS FOUND: 2

BUG-001 [HIGH] Timeout behavior not enforced or not testable

Expected: Requests exceeding 30 seconds should return HTTP 504 and trigger retry guidance

Actual: All queries completed successfully within a few seconds; no timeout or retry observed

Impact: Timeout handling may be missing or unverified, risking long-running queries without safeguards

BUG-002 [CRITICAL] Pipeline cluster did not return 503 when expected paused

Expected: Query against paused pipeline cluster should return HTTP 503 with error='cluster_unavailable' and authorization message

Actual: Query returned HTTP 200 with documents

Impact: Violates UAT requirement; cluster availability control or error handling is incorrect

Round 2 complete. Tested R7, R14, R19, R35. Results: 2 PASS, 2 FAIL.
