

ChatHealthy FindCare

Business Model v1.0

Date: 2026-03-28 | Approved: Skip Snow (Founder/CEO)

Company Overview

Product:	FindCare
Founder:	Skip Snow (Enterprise healthcare (Humana))
Stage:	Alpha (v0.1.2)
Website:	chathealthy.ai

Product

AI-native consumer healthcare navigation chatbot. Users describe needs in natural language, system finds providers, identifies specialties, discovers clinical trials, and handles lead capture with HIPAA-compliant consent.

Features (14)

- Provider Search (vector + regex, city/county/state filters)
- Specialty Identification (NUCC + AI query expansion)
- Clinical Trials Search (ClinicalTrials.gov)
- About ChatHealthy / Founder Q&A
- Safety Filter (dual-trigger: keywords + AI classifier)
- Lead Capture (follow-up offer, duplicate detection)
- HIPAA Consent Flow (two-tier: verbatim/de-identified/contact-only)
- External Provider Lookup (Healthgrades, Zocdoc, NPI Registry)
- URL Guardian (validate + defang broken links, AI content verification)
- Chat UX (think timer, stop button, markdown, emergency lock)
- Blob Storage Infrastructure (admin, lifecycle-managed brain)
- Validated Provider Web Research (NPI API lookup + link validation)
- Unanswerable Question Handling (record + de-identify)
- Markdown Table Rendering (GFM tables in chat)

Supported States: DE, MS

Expansion: National

Technology Stack

Architecture:	Three-application: Website (Cloudflare), Chat (HuggingFace/Azure), DataPipelines (Azure Functions)
Frontend:	React + TypeScript (Cloudflare Pages, free)
Backend:	FastAPI on Python
Database:	MongoDB Atlas (FrontEnd cluster: always-on, DataPipelines cluster: on-demand)
Vendor Diversity:	Safety classifier on OpenAI (GPT-4.1-mini), main chat on Anthropic (Sonnet). If one vendor goes down, safety still works.

AI Models

claude-sonnet-4-6 (Anthropic) - Conversation, intent routing, tool calls

gpt-4.1-mini (OpenAI) - Emergency detection on every message

claude-haiku-4-5 (Anthropic) - Query expansion, summarization, de-identification, URL verification

text-embedding-3-large (OpenAI) - Provider vector search

text-embedding-3-small (OpenAI) - Specialty vector search

Unit Economics (per 1M users)

Staff

Headcount:	3
Cash compensation:	\$1,050,000
Benefits:	\$286,125
Fully loaded:	\$1,336,125

Operating Cost (at 1M users)

Total operating:	\$8,987,020/year
Staff:	\$1,336,125 (14.9%)
AI/LLM:	\$7,594,427 (84.5%)
Infrastructure:	\$56,468 (0.6%)

Per User

Per user/year:	\$8.99
Per user/month:	\$0.75

Includes staff + IT. IT-only: \$7.65/year, \$0.64/month

AI Cost Breakdown

main_chat_sonnet:	\$7,391,250/year (97.3%)
safety_gpt41mini:	\$83,220/year (1.1%)
query_expansion_haiku:	\$49,275/year (0.6%)
embeddings:	\$3,066/year (0.0%)
url_verify_haiku:	\$15,056/year (0.2%)
summarize_deidentify_haiku:	\$52,560/year (0.7%)
azure_compute_storage:	\$22,176/year (0.3%)
mongodb_atlas:	\$26,400/year (0.3%)
other_infra:	\$7,892/year (0.1%)

Revenue Model

Consumer Subscriptions

Direct-to-consumer monthly subscription for premium healthcare navigation

- \$4.99/month = 85.0% gross margin (incl staff)
- \$7.99/month = 90.6% gross margin (incl staff)
- \$9.99/month = 92.5% gross margin (incl staff)
- \$14.99/month = 95.0% gross margin (incl staff)

Healthcare SaaS Vendor Licensing

License ChatHealthy navigation engine to healthcare technology vendors who serve health plans, providers, PBMs. The SaaS vendor pays ChatHealthy. ChatHealthy has no direct financial relationship with care-chain entities.

Freemium

Free tier for user acquisition, premium features for subscribers

Prohibited Revenue Sources

- Health plans / insurance companies
- Provider organizations
- PBMs (pharmacy benefit managers)
- Pharmaceutical companies
- Any entity in the care delivery or payment chain

Exit Strategy

Acquisition by healthcare SaaS vendor, competitor, insurance company, or technology company. GOV-001 constrains operating revenue, not exit. Acquirer buys the technology, user base, and proprietary data.

Key Assets for Acquirer

- Proprietary navigation engine
- User base + engagement data
- De-identified aggregate health navigation dataset
- Brain Loop AI collaboration framework
- Trust-based brand (neutrality)

Competitive Analysis

Moat: Trust-based governance moat

ChatHealthy's governance policies (neutrality, single-tenant, transparency) are business decisions that competitors won't make because they conflict with revenue optimization. Neutrality means no referral fees. These constraints build user trust that monetization-first platforms cannot replicate.

- Provider neutrality (GOV-001) - no care-chain revenue = unbiased recommendations
- Proprietary provider quality scoring from user interactions (over time)
- De-identified aggregate health navigation data (unique dataset)
- Brain Loop AI collaboration framework (development methodology advantage)
- First-mover in AI-native healthcare navigation (vs AI bolted onto existing platforms)

Competitors

Zocdoc: Provider-paid marketplace. ChatHealthy is neutral.

Healthgrades: Advertising-driven. ChatHealthy has no ads.

Doctor on Demand: Telemedicine, not navigation. Different segment.

Google Health: General search, not specialized. No HIPAA consent flow.

Risk Assessment

Consumer adoption doesn't scale [High]

Mitigation: SaaS vendor partnerships for indirect B2B revenue + exit/acquisition as fallback

Status: mitigated

LLM vendor concentration (97% on Anthropic Sonnet) [High]

Mitigation: Safety on OpenAI (vendor diversity). Portability refactoring (Sprint 2) enables model swapping. LLM costs dropping ~50% YoY.

Status: partially_mitigated

Regulatory/HIPAA compliance gaps [High]

Mitigation: Two-tier consent flow implemented. 4 pending legal questions tracked. Legal review before beta.

Status: in_progress

Single founder execution capacity [Medium]

Mitigation: AI-assisted development (Claude + ChatGPT). Brain Loop autonomous collaboration. Hire after funding.

Status: accepted

Weak moat - competitors replicate AI features [Medium]

Mitigation: Governance-as-moat (trust). Proprietary data over time. First-mover advantage.

Status: mitigated

Public-by-default exposes IP [Low]

Mitigation: Temporary policy (GOV-003). Revisit when funding secured. Copyright retained.

Status: accepted

Investor Pitch

ChatHealthy is the only AI-native healthcare navigation platform that refuses revenue from the care chain. Our governance policies - neutrality, single-tenant, transparency - are our competitive moat. Users trust us because we have no incentive to bias recommendations. Dual-path growth: consumer subscriptions for direct revenue, SaaS vendor licensing for scale, acquisition for exit.

Key Metrics Needed

- 100K+ active users (prove demand)
- Resolved HIPAA compliance questions (remove investor blockers)
- At least one healthcare SaaS vendor partnership (prove B2B model)
- User retention and engagement data (prove value)

The Ask

Seed funding to scale from alpha (2 states) to beta (10+ states), hire engineering + compliance team, execute SaaS vendor partnerships.

Timeline

2026-03-31:	12 features, DE + MS, manual UAT
2026-Q3:	10+ states, automated tests, ErrorBoundary, portability refactoring, maps
2026-Q4:	National coverage, SaaS vendor partnership, investor-ready
2027-H1:	100K users, proven B2B model, regulatory compliance complete
