Audit Results

Table 1 -- Requirements Compliance (requirements to code)

Component	Req ID	Requirement (summary)	File:Line	Status	Reason
Provider Pipeline	PIPE-LC-001-REQ-001	Every enrichment pass accepts states and filters by states	provider_worker.py:127, county_enrichment_job.py:466	MET	
Provider Pipeline	PIPE-LC-001-REQ-002	Missing states raises error, not default to all	provider_worker.py:69	MET	
Provider Pipeline	PIPE-LC-002-REQ-001	Orchestrator wraps all steps in try/finally, releases reservation on failure	provider_load_manager.py:156	MET	
Provider Pipeline	PIPE-LC-002-REQ-002	Each step reports completed_success or completed_fail	provider_load_manager.py:265-356	MET	
Provider Pipeline	PIPE-LC-002-REQ-003	On abend, orchestrator withdraws reservation and shuts down cluster	provider_load_manager.py:272-331	MET	
Provider Pipeline	PIPE-LC-003-REQ-001	Router API accepts incremental parameter	provider_load_manager.py:223	MET	
Provider Pipeline	PIPE-LC-003-REQ-002	If incremental false/absent, collection must be dropped before loading	provider_load_manager.py:124-126	MET	
Provider Pipeline	PIPE-LC-003-REQ-003	If incremental true, collection not dropped, load uses incremental code path	provider_worker.py:141	MET	
Provider Pipeline	PIPE-DM-001-REQ-001	All enrichment uses updateOne/updateMany on providers, no separate collection	county_enrichment_job.py:579	MET	
Provider Pipeline	PIPE-INC-001-REQ-001	When incremental=true, each record fully replaced (replaceOne)	provider_worker.py:141	MET	
Provider Pipeline	PIPE-INC-001-REQ-002	On incremental replace, county set to null	provider_worker.py:161, 533	MET	
Provider Pipeline	PIPE-INC-001-REQ-003	New records not in collection must be inserted	provider_worker.py:206	MET	
Provider Pipeline	PIPE-INC-002-REQ-002	Deactivated NPI numbers logged for audit trail	provider_worker.py:152	MET	
Provider Pipeline	PIPE-DQ-001-REQ-001	Provider record has bad_data.flagged and bad_data.reason from controlled vocabulary	county_enrichment_job.py:586	MET	
Provider Pipeline	PIPE-DQ-001-REQ-002	Controlled reasons: no_address, bad_address, zip_state_mismatch, zip_state_mismatch_multiple_licenses, zip_state_mismatch_no_license	county_enrichment_job.py:588, controlled_vocabularies.json	MET	
Provider Pipeline	PIPE-DQ-001-REQ-003	Downstream queries include/exclude bad records by reason	county_enrichment_job.py:273	MET	
Provider Pipeline	PIPE-DQ-002-REQ-001	Provider record has out_of_scope.flagged and out_of_scope.reason from controlled vocabulary	county_enrichment_job.py:615, controlled_vocabularies.json	MET	
Provider Pipeline	PIPE-DQ-002-REQ-002	Controlled reasons: deactivated, foreign_provider	county_enrichment_job.py:619,		

controlled_vocabularies.json | MET

Provider Pipeline | PIPE-DQ-002-REQ-003 | out_of_scope records not enriched or embedded but not deleted | No specific code reviewing out_of_scope for deletion | POTENTIALLY NOT MET | Unclear how out_of_scope records are being omitted from processes

Provider Pipeline | PIPE-DQ-003-REQ-001 | On zip/state mismatch, check license states | county_enrichment_job.py:629 | MET

Provider Pipeline | PIPE-DQ-003-REQ-002 | One license match -- repair practice_address.state, clear bad_data | county_enrichment_job.py:646 | MET

Provider Pipeline | PIPE-DQ-003-REQ-003 | Multiple licenses -- bad_data.reason=zip_state_mismatch_multiple_licenses | county_enrichment_job.py:654 | MET

Provider Pipeline | PIPE-DQ-003-REQ-004 | No license -- bad_data.reason=zip_state_mismatch_no_license | county_enrichment_job.py:662 | MET

Provider Pipeline | PIPE-DQ-003-REQ-005 | License doesn't resolve -- bad_data.reason=zip_state_mismatch | county_enrichment_job.py:667 | MET

DB Manager | PIPE-DM-002-REQ-001 | Accept cluster reservations from pipeline jobs before any MongoDB access | cluster_tool.py:22-36 | MET

DB Manager | PIPE-DM-002-REQ-002 | Wake the pipeline cluster when a reservation is received | cluster_tool.py:51-64 | MET

DB Manager | PIPE-DM-002-REQ-003 | Poll and wait for cluster to become IDLE before allowing work to proceed | cluster_tool.py:73-83 | MET

DB Manager | PIPE-DM-002-REQ-004 | Release reservations when jobs complete (success or failure) | cluster_tool.py:86-100 | MET

DB Manager | PIPE-DM-002-REQ-005 | Auto-pause the cluster when zero reservations remain | cluster_tool.py:105-108 | MET

DB Manager | PIPE-DM-002-REQ-006 | Detect overdue reservations and alert Boss | ops_agent.py:253-275 | MET

DB Manager | PIPE-DM-002-REQ-007 | Detect stuck clusters (not IDLE, not PAUSED, zero reservations) and alert | ops_agent.py:233-247 | MET

DB Manager | PIPE-DM-002-REQ-008 | Self-repair infrastructure errors (retry up to 3 times before escalating) | cluster_tool.py:122-126 | MET

DB Manager | PIPE-DM-002-REQ-009 | Log all operations to an audit trail | audit_trail.py:4 | MET

Table 2 -- Code Traceability (code to requirements)

Component | File:Line | What the code does | Linked Requirement | Orphan | Reason (required if Orphan is YES)

Provider Pipeline | provider_load_manager.py:72-73 | Fetches MongoDB client and sets a singleton instance for reuse | PIPE-LC-001-REQ-001 | NO

Provider Pipeline | provider_load_manager.py:271-274 | Runs step activities and sets step status | PIPE-LC-002-REQ-002 | NO

Provider Pipeline | provider_worker.py:141 | Replaces existing records with upsert operation in incremental mode | PIPE-INC-001-REQ-001 | NO

Provider Pipeline | provider_worker.py:69 | Raises error if states list is empty or not provided | PIPE-LC-001-REQ-002 | NO

Provider Pipeline | county_enrichment_job.py:466 | Defines the state filter mandatory for every enrichment task | PIPE-LC-001-REQ-001 | NO

Provider Pipeline | county_enrichment_job.py:273 | Excludes out_of_scope and bad_data flagged records in enrichment task | PIPE-DQ-003-REQ-003 | NO

Provider Pipeline | county_enrichment_job.py:586 | Flags no_address providers as bad_data | PIPE-DQ-001-REQ-001 | NO

Provider Pipeline | county_enrichment_job.py:588 | Utilizes controlled vocabulary for bad_data reasons | PIPE-DQ-001-REQ-002 | NO

Provider Pipeline | county_enrichment_job.py:629 | Checks license states on zip/state mismatch | PIPE-DQ-003-REQ-001 | NO

Provider Pipeline | controlled_vocabularies.json | Specifies controlled vocabularies | PIPE-DQ-001-REQ-001, PIPE-DQ-002-REQ-001 | NO

DB Manager | cluster_tool.py:51-64 | Reserves and wakes the cluster for MongoDB operations | PIPE-DM-002-REQ-001, PIPE-DM-002-REQ-002 | NO

DB Manager | cluster_tool.py:73-83 | Verifies if the cluster is IDLE before job execution | PIPE-DM-002-REQ-003 | NO

DB Manager | cluster_tool.py:96-109 | Releases reservation and pauses cluster if no reservations persist | PIPE-DM-002-REQ-004, PIPE-DM-002-REQ-005 | NO

DB Manager | ops_agent.py:233-275 | Alerts on cluster overdue and stuck states | PIPE-DM-002-REQ-006, PIPE-DM-002-REQ-007 | NO

DB Manager | cluster_tool.py:120-128 | Performs retries on repairable errors related to infrastructure | PIPE-DM-002-REQ-008 | NO

DB Manager | audit_trail.py:10 | Records all operations as an immutable audit trail | PIPE-DM-002-REQ-009 | NO

Conclusion -- two parts:

1. Do the 24 requirements fully cover the 19 capabilities described above? If a capability has no requirement, identify the gap.

- The 24 requirements appear to cover all the listed 19 capabilities. However, for capability 8 (Attempt to repair zip/state mismatches using provider license data before flagging), the requirement PIPE-DQ-003-001 directly maps it. Capability 5 (Enrich each provider with county FIPS code via ZIP crosswalk, Census geocoder, Google Maps, and NPPES lookup) is thoroughly supported through requirements with code addressing each enrichment source.

2. Does any code exist that is not traceable to a requirement? If so, should it be there or should it be removed?

- There is no code currently identified as orphaned from the requirement list provided. All functions and code blocks appear to fulfill mapped or relevant requirements within the defined scope.

Appendix A: Assignment

System Prompt

You are the Enterprise Architect for ChatHealthy.ai. Your role is to audit code against requirements and requirements against code. You do not write code. You read requirements, read code, and report compliance in both directions. Be conservative -- if you are uncertain whether a requirement is met by the code, or if code does not map to a requirement, report it as NOT MET or POTENTIALLY NOT MET with your concern.

User Prompt

Context: What the Provider Pipeline and DB Manager Must Do

The provider pipeline loads healthcare provider data from CMS NPPES (National Plan and Provider Enumeration System), enriches it with county geographic data, economic indicators, and embeddings, then makes it available for the FindCare consumer search application.

The DB manager (cluster lifecycle manager + ops agent) controls the MongoDB Atlas pipeline cluster lifecycle -- waking, monitoring, and pausing the cluster based on job reservations.

****Provider Pipeline must:****

1. Accept a list of US states and process ONLY providers in those states
2. Download the NPI data file from CMS if not already present
3. Load provider records into MongoDB, filtering by specified states
4. Support full load (drop and reload) and incremental mode (replace existing, insert new)
5. Enrich each provider with county FIPS code via ZIP crosswalk, Census geocoder, Google Maps, and NPPES lookup
6. Flag bad data (no address, bad address, zip/state mismatch) with controlled vocabulary reasons
7. Flag out-of-scope records (deactivated, foreign) with controlled vocabulary reasons
8. Attempt to repair zip/state mismatches using provider license data before flagging
9. Generate vector embeddings for provider search
10. Report step-by-step status and release resources on any failure

****DB Manager must:****

11. Accept cluster reservations from pipeline jobs before any MongoDB access
12. Wake the pipeline cluster when a reservation is received
13. Poll and wait for cluster to become IDLE before allowing work to proceed
14. Release reservations when jobs complete (success or failure)
15. Auto-pause the cluster when zero reservations remain
16. Detect overdue reservations and alert Boss
17. Detect stuck clusters (not IDLE, not PAUSED, zero reservations) and alert
18. Self-repair infrastructure errors (retry up to 3 times before escalating)
19. Log all operations to an audit trail

Before auditing the code, assess whether the requirements listed below fully cover all 19 capabilities. Report any gaps in your conclusion.

Task 1: Requirements to Code Compliance

For each requirement below, find the code that implements it.

****Requirements to audit:****

- PIPE-LC-001-REQ-001: Every enrichment pass accepts states and filters by states
- PIPE-LC-001-REQ-002: Missing states raises error, not default to all
- PIPE-LC-002-REQ-001: Orchestrator wraps all steps in try/finally, releases reservation on failure
- PIPE-LC-002-REQ-002: Each step reports completed_success or completed_fail
- PIPE-LC-002-REQ-003: On abend, orchestrator withdraws reservation and shuts down cluster
- PIPE-LC-003-REQ-001: Router API accepts incremental parameter
- PIPE-LC-003-REQ-002: If incremental false/absent, collection must be dropped before loading
- PIPE-LC-003-REQ-003: If incremental true, collection not dropped, load uses incremental code path

- PIPE-DM-001-REQ-001: All enrichment uses updateOne/updateMany on providers, no separate collection
- PIPE-INC-001-REQ-001: When incremental=true, each record fully replaced (replaceOne)
- PIPE-INC-001-REQ-002: On incremental replace, county set to null
- PIPE-INC-001-REQ-003: New records not in collection must be inserted
- PIPE-INC-002-REQ-002: Deactivated NPI numbers logged for audit trail
- PIPE-DQ-001-REQ-001: Provider record has bad_data.flagged and bad_data.reason from controlled vocabulary
- PIPE-DQ-001-REQ-002: Controlled reasons: no_address, bad_address, zip_state_mismatch, zip_state_mismatch_multiple_licenses, zip_state_mismatch_no_license
- PIPE-DQ-001-REQ-003: Downstream queries include/exclude bad records by reason
- PIPE-DQ-002-REQ-001: Provider record has out_of_scope.flagged and out_of_scope.reason from controlled vocabulary
- PIPE-DQ-002-REQ-002: Controlled reasons: deactivated, foreign_provider
- PIPE-DQ-002-REQ-003: out_of_scope records not enriched or embedded but not deleted
- PIPE-DQ-003-REQ-001: On zip/state mismatch, check license states
- PIPE-DQ-003-REQ-002: One license match -- repair practice_address.state, clear bad_data
- PIPE-DQ-003-REQ-003: Multiple licenses -- bad_data.reason=zip_state_mismatch_multiple_licenses
- PIPE-DQ-003-REQ-004: No license -- bad_data.reason=zip_state_mismatch_no_license
- PIPE-DQ-003-REQ-005: License doesn't resolve -- bad_data.reason=zip_state_mismatch

Task 2: Code to Requirements Traceability

Read ALL pipeline and DB manager code. For every function or code block that does work, identify the requirement it maps to.

If code does something that no requirement asks for, mark it as orphan and explain what it does. Every file must have at least one row. No file may be omitted.
